# Ninna Svanström

I am Ninna, a 27 year old student at the Interaction Design and Technologies master program at Chalmers University of Technology, currently looking for a master thesis and internship.

I am a very outgoing, open minded and curious person. As 17 years old I moved by myself London for a year to study at the Swedish School in London for my second year of high school. This experience had a large impact on my self esteem, indepenence and maturity. In 2021 I graduated from my bachelor in Cognitive Science, which was a program that perfectly balanced technology and human psychology and philosophy, two of my favorite subjects. Starting the IxD master immediately after graduating was an easy decision, as I am very creative but have a growing passion for technology and IT.

My time at Chalmers has been absolutely fantastic, and I feel more confident about my knowledge and skills than ever. I have learned how to collaborate in diverse groups, utilize and practice my creativity, skills in several softwares, useful design tools and methods, discipline and excitement for the design and IT industry. I believe that UX, UI and interaction design as well as web development is the most natural professions for me, and I am confident in the high quality work that I always am deliver with pride!

On my freetime I spend doing creative and selffulfilling activies. I play a lot of piano, which I have since I was 10 years old. I try to read whenever I find time, both novels and popular science. I started drawing again (a hobby I had as a kid and teenager), and I have recently fallen in love with graphical design. I also try to nurture my mind and body by spending a lot of time either at the gym or out walking in nature, meditating or dancing, or in the kitchen trying out a new recipe.

I am confident that I would be a great and loyal contribution to your team, and that I would deliver all of my assigned task with high passion and love, because I truly love this industry and what I do.

Best, Ninna.
